TITLE : BUMPER RUBBER

ABSTRACT : PROBLEM TO BE SOLVED: To simplify attaching operation of a bumper rubber by blocking an insertion hole by means of a part of divided insertion part.

SOLUTION: An insertion portion 4 of a bumper rubber 1 is prepared by arranging a columnar projection 5 at its center portion, and circularly arranging a truncated conical engagement portion 7 divided into two at least in a diametrical direction at its periphery. When a part of the divided engagement part 7 is pressurized by an inner peripheral edge of an insertion hole 8, and is set to the center side, its prevented from setting by abutting against the columnar projection 5. Blocking of the insertion hole 8 is thus prevented, and attachment is smoothly performed.
